Skills

- Java, Javascript
- React, Spring, Camel
- Web Application Development

Work Experience

Software Developer

Dealer.com, June 2014 - present

- Developed monitoring tools that allows web developers to quickly monitor inventory across all development and production environments, ensuring accurate data when testing changes. Application uses Spring Boot for the REST services, and React JS for the presentation.
- Developed batch service to retrieve and process payment and leasing financial data across all car dealership inventory, allowing customers to estimate accurate payments and driving loan qualification.
- Coordinated with project managers and technical leads to design and implement a customizable tabbed slideshow widget for a major auto group.

Software Developer

Rainworx Software, September 2006 - June 2014

- Developed AuctionWorx and rwAuction Pro online auction software as part of a three person team using the Microsoft .NET stack.
- Worked with clients to create technical specifications, cost analysis, and time estimates in order to accomplish technical and design goals.
- Designed and implemented buyers premium, flat, and consignment fee calculation and invoicing systems to help clients track and charge buyers and sellers on their auction sites.
- Designed and implemented item watch notification system to help buyers track bids and time left, updating the buyer dashboard and optionally sending email notifications.
- Designed and implemented real time pricing system using a comet server to push updates to subscribers.

Education

Bachelor of Science (B.S.), Software Engineering

Vermont Technical College - Randolph, VT
